

Torsion-Flex Soil Conditioners

Designed to Perform...Built to Last

Flex your muscles the next time you're working ground with a J&M Torsion-Flex Soil Conditioner. The double basket design features a torsion-flex arm that maintains proper ground tension and allows the basket to flex over uneven terrain. The result is a more consistent performance that levels and finishes the soil in one pass...preparing a more uniform seed bed composed of finer soils at planting depth and larger particles on top to reduce crusting.

12' to 45'
Working Widths

- Offset Dual Baskets
